SOAP and WSDL

Oxford University
Software Engineering
Programme
December 2018

Contents

- Understanding WS-*
- SOAP
- SOAP examples
- WSDL

WS-* Standards

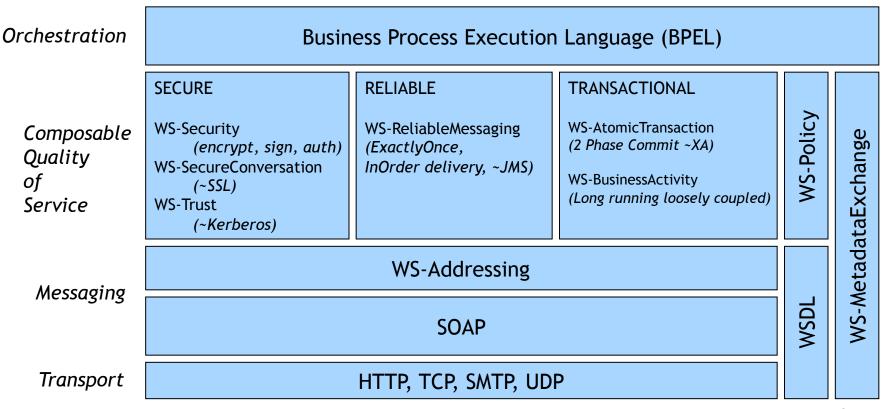

- A set of extensible and composable standards that work together
- Providing a common, standard, interoperable base to implement SOA

Key Web Services Standards

Wire interaction

Metadata

The Web services platform forms a complete framework for open standards enterprise middleware

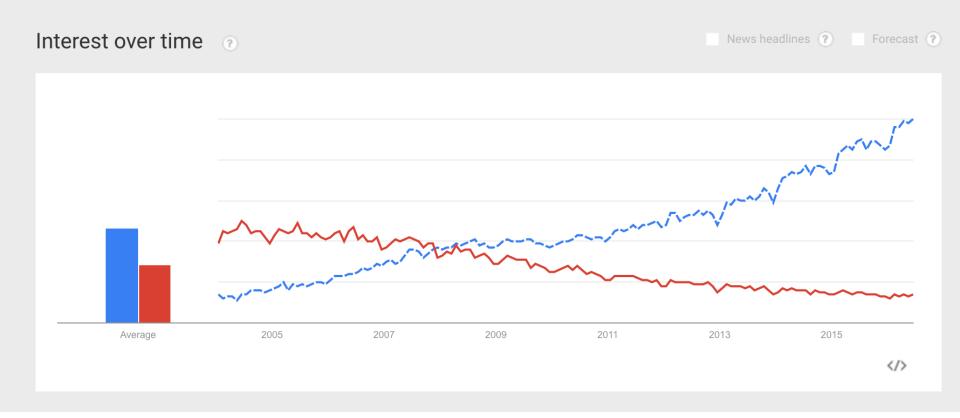

Representational state transfer

Protocol

wsdl Search term

+ Add term

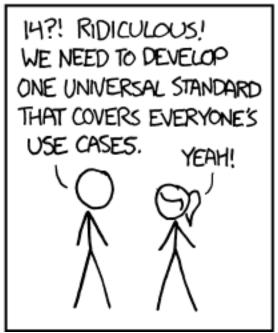

Beta: Measuring search interest in *topics* is a beta feature which quickly provides accurate measurements of overall search interest. To measure search interest for a specific *query*, select the "search term" option.

HOW STANDARDS PROLIFERATE: (SEE: A/C CHARGERS, CHARACTER ENCODINGS, INSTANT MESSAGING, ETC.)

SITUATION: THERE ARE 14 COMPETING STANDARDS.

500N:

SITUATION: THERE ARE 15 COMPETING STANDARDS.

A Sample SOAP Message

```
<soap:Envelope xmlns:soap="http://</pre>
  schemas.xmlsoap.org/soap/envelope/">
 <soap:Header/>
 <soap:Body>
  <getProductDetails</pre>
                          xmlns="http://
  warehouse.example.com/ws">
  oductID>827635
  getProductDetails>
 </soap:Body>
</soap:Envelope>
```

A Sample SOAP Message (cont)

```
<soap:Envelope xmlns:soap="http://</pre>
  schemas.xmlsoap.org/soap/envelope/">
 <soap:Header/>
 <soap:Body>
  <qetProductDetails xmlns="http://</pre>
  warehouse example.com/ws">
   oductID 827635/
  getProductDetails>
  </soap:Body>
                       The SOAP header provides a space
                       for arbitrary headers to be added to
</soap:Envelope>
                       the message`
```

A Sample SOAP Message (cont)

```
<soap:Envelope xmlns:soap="http://</pre>
  schemas.xmlsoap.org/soap/envelope/">
 <soap:Header/>
 <soap:Body>
  <getProductDetails</pre>
                           xmlns="http://
  warehouse.example.com/ws">
   oductID>827635
  getProductDetails>
  </soap:Body>
</soap:Envelope>
```

The contents of the SOAP body element can be any valid XML that the parties wish to interchange

Attributiq See http://creativecommons.org/licenses/bv-nc-sa/4.0/

Using SOAP Headers

- Some simple examples
 - Add a signature to ensure the message isn't modified
 - Add a process identifier to track this message as part of a wider process
 - Add a userid so that end-to-end security can be guaranteed
 - Add a message number so messages can be resent if lost

What is a service definition?

What is a service definition?

- What does it do?
- Where is it?
- Who owns and runs it?
- Is it going to be up on Monday?
- What do I have to do to use it?
- How much does it cost?

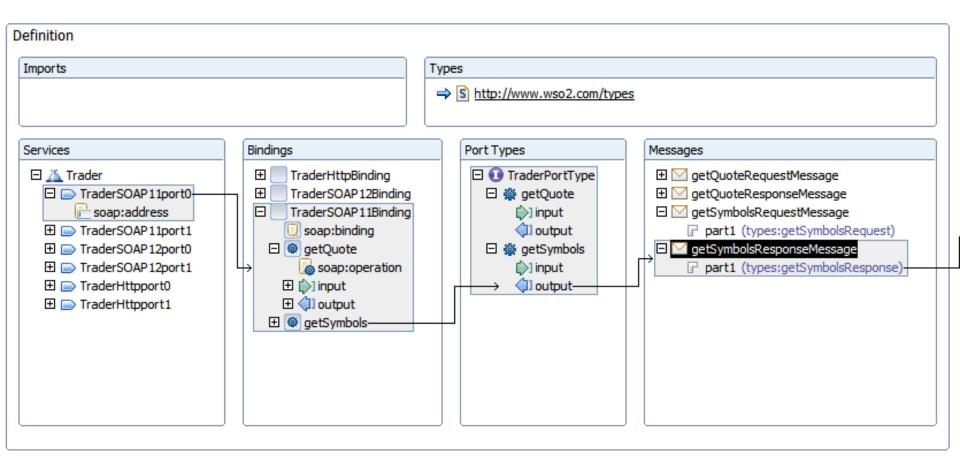

What is a service definition?

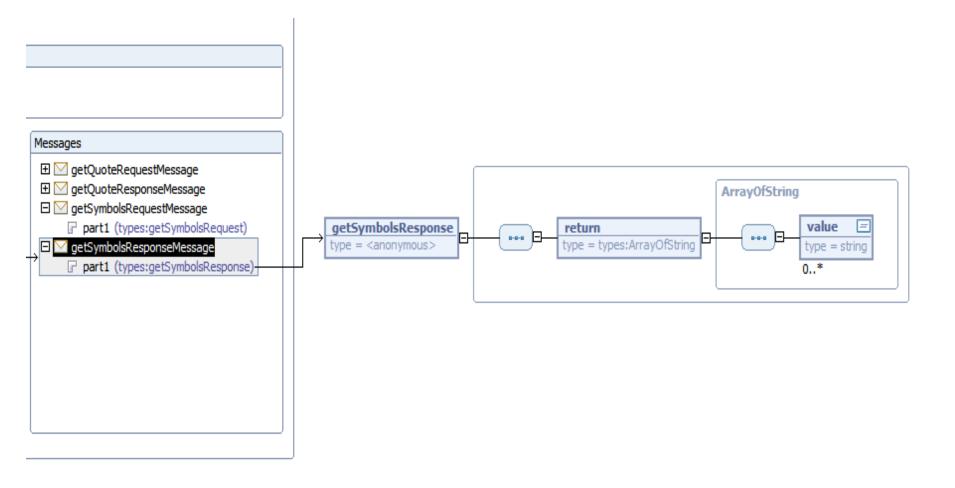

- What does it do?
- Where is it?
- Who owns and runs it?
- Is it going to be up on Monday?
- What do I have to do to use it?
- How much does it cost?

Graphical view of WSDL

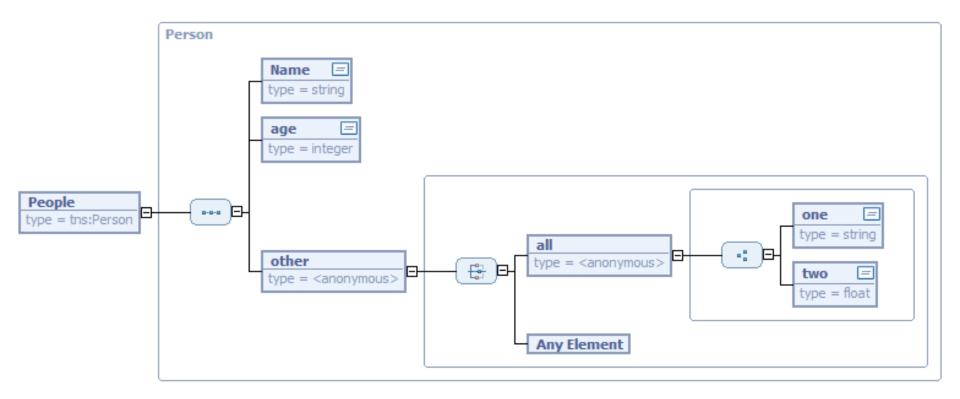

WSDL link to Schema

Graphically

Granularity

- Fine-grained
- Are you exposing services or the internals of your application?
- Often the result of taking existing APIs and "service-enabling" them
- Coarse grained
- Generally considered better
- But can be too big
 - Require too much data passed in every request
 - Need to be useful in your enterprise

Bottom-up modelling

- Take existing code and expose as services
- Unlikely to expose re-usable services
 - Because the existing code was designed to be used within the application
- Quick way to get started

Top down design

High level model (process model, data model)

Required Services

Schemas and WSDL

Java Code (business logic)

Why Contract First?

- Advantages
 - Agree the external interface
 - Good design principle
 - How Service Oriented Architecture is meant to be
 - Focus the mind on what is most important
 - Improves interoperability
 - WSDL first design leads to much more interop
- Disadvantages
 - Need to know WSDL and Schema syntax!

Summary

- SOAP was designed to be a simpler alternative to CORBA
- SOAP has good descriptions and tooling
- However, RESTful approaches rapidly disrupting the market
