Install Ballerina 0.990.0

1. Go to https://ballerina.io
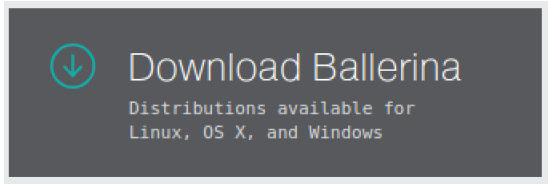

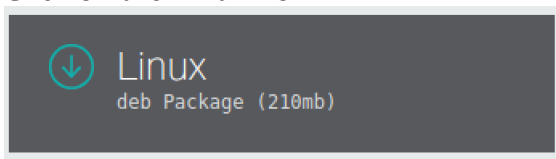

2. Click on the Download box:

3. Click on the Linux Box:

4. When the download has finished, install the .deb:

   ```
   sudo dpkg -i ~/Downloads/ ballerina-linux-installer-x64-0.990.0.deb
   ```

5. Validate that you have it installed properly:
   ```
   $ ballerina version
   Ballerina 0.990.0
   ```

6. Unfortunately we have an out-of-date vscode plugin, and some associated config that needs removing first.

7. If not, then:

   a. Open vscode
   b. Hit Ctrl+, to edit settings
   c. Type ballerina into the search bar
   d. Delete the contents of the Ballerina Home box

   e. Ignore the message:

`f.` Close the settings window and then exit vscode

`g.` On the command line do the following:
`rm -rf ~/.vscode/extensions/ballerina.ballerina-0.983.1/`

h. Start vscode again

i. Command Palette -> Install Extensions

j. Search extensions for Ballerina

k. Click Install

l. Wait a bit….

m. Click **Reload to Activate**

n. That's all!
